MICROFILM CORP.

Methylene Blue
Analysis

CUSTOMER NAME: MicoR Corp

ADDRESS: 800 Clermont Ave. Bensalem, PA. 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than (<) 1.4 mg (micrograms) indicate archival quality, and greater than (>) 1.4 mg indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

TEST IDENT.	ACTUAL CONCENTRATION	MEETS ANSI STANDARD (<) 1.4 mg	DOES NOT MEET ANSI STANDARD (>) 1.4 mg
MARRIAGE BUREAU 1914-15, 16, 17	.11	✓	

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI standard 179.1-AS: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 mg for residual thiosulfate.

BIELS SINCE 1939
MICROFILM CORP.

Methylene Blue
Analysis

CUSTOMER NAME: MicoR Corp.

ADDRESS: 800 Claremont Ave. Bensalem, PA 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). they were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than (<) 1.4 ug (micrograms) indicate archival quality, and greater then (>) 1.4 ug indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

TEST IDENT.	ACTUAL CONCENTRATION	MEETS ANSI STANDARD (<) 1.4 mg	DOES NOT MEET ANSI STANDARD (>) 1.4 mg
MARRIAGE BUREAU 1914-15, 16, 17	.11	✓	

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI standard 179.1-AS: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 ug for residual thiosulfate.
